1 Overview

This guide details the deployment of Pathlock DAC for Data Scrambling in non-production systems. It specifies the necessary prerequisites and the sequential procedures for successful implementation, thereby ensuring data integrity and security while efficiently managing non-production environments.

1.1 Purpose

This guide describes the deployment of Pathlock DAC - Data Scrambling in non-production systems.

Important Information:

- Data scrambling is only permissible in non-production systems.
- Retaining a client backup before proceeding with data scrambling is advisable.
- Cluster tables are not supported.
- A field value, once scrambled, cannot be scrambled again.

1.2 Required Roles and Authorization Objects

The following PFCG Roles are essential for accessing the Pathlock DAC - Data Scrambling application:

PFCG Roles	Purpose	T-Code Assigned
/APPSDM/DS_ADMIN	This administrative role grants extensive access for configuring and executing data scrambling.	/APPSDM/DS – Data Scrambling configuration

The following authorization objects are required to access the Pathlock DAC - Data Scrambling UI:

Authorization Object	Activity	PFCG Roles
Y&DS_CONF	02 (Change) 03 (Display)	/APPSDM/DS_ADMIN - Pathlock DAC: Data Scrambling
Y&DS_SCR	04 (Prepare Staging) 05 (Process Scrambling)	/APPSDM/DS_ADMIN - Pathlock DAC: Data Scrambling

Note: Users require an additional PFCG role, which must be assigned in **T-Code** /N/APPSDM/DS_AUTHSETUP, to perform Data Scrambling.

2 Configuring Pathlock Data Scrambling

To perform data scrambling within a non-production system, you must configure Pathlock Data Scrambling using the Pathlock DAC: Data Scrambling tool. You can access this tool via transaction /N/APPSPDM/DS or through the user menu path Pathlock DAC: Data Scrambling.

Pathlock Data Scrambling configurations are broadly categorized into two sections:

- [Functional Configuration](#)
- [Technical Configuration](#)

2.1 Functional Configuration

Business users perform functional configuration through the following steps:

- **Define Scramble Attribute:** This step defines the Scramble Attribute for data scrambling. Each Scramble Attribute requires the assignment of at least one Key Attribute.

For example, to scramble the Gross Weight of a material, Gross Weight is defined as the Scramble Attribute, and Material Number is defined as the Key Attribute.

Note: Use SCRAMBLE. as a prefix to define Scramble Attribute and KEY. as a prefix to define Key Attribute.

Scramble Attribute	Description	Key Attribute
SCRAMBLE.ADDRESS		Key Attributes
SCRAMBLE.BANK_ACCOUNT	Bank Account Number	Key Attributes
SCRAMBLE.BIRTH_DATE	BIRTH Date	Key Attributes
SCRAMBLE.CENTRALIZATION	Centralized Attribute	Key Attributes
SCRAMBLE.CHANGED_ON_PERNER	Changed On	Key Attributes
SCRAMBLE.COMPANY_NAME	COMPANY Name	Key Attributes
SCRAMBLE.DIVISION	Division	Key Attributes
SCRAMBLE.DOC_DATE	Document Date	Key Attributes
SCRAMBLE.EMAIL_ADDRESS	Email Address	Key Attributes
SCRAMBLE.EMAIL_ADDRESS_CAPS	Email Address Caps	Key Attributes
SCRAMBLE.FIRST_NAME	First Name of Perner NO	Key Attributes
SCRAMBLE.GROSS_WEIGHT	Gross Weight	Key Attributes
SCRAMBLE.MAT_DESC	Material Description	Key Attributes
SCRAMBLE.MONTH_OF_BIRTH	Month of Birth	Key Attributes
SCRAMBLE.PERSON	Person	Key Attributes
SCRAMBLE.QUANTITY	Quantity	Key Attributes
SCRAMBLE.SSN	Tax ID National/ State Identifier/SSN...	Key Attributes
SCRAMBLE.START_DATE	Start Date of Role	Key Attributes
SCRAMBLE.TIME	Scramble Time	Key Attributes
SCRAMBLE.YEAR	Year	Key Attributes

- **PIP Data Attribute:** This step defines data attributes for data objects such as Business Partner, Sales Document, Employee Salary, Country, etc. These attributes are required to define filter criteria. Additionally, DAC offers a customer-specific implementation that allows the derivation of Data attributes as required.

For example, a Data Attribute such as Material Group can be defined and used in filter criteria to scramble the Gross Weight for materials belonging to specific material groups.

Note: Use DATA. as a prefix to define all Data Attributes.

- **Define Pattern:** This step defines a pattern to determine how the final output appears after scrambling. The pattern guides the transformation of the original data into its scrambled form.

The solution delivers the following patterns:

- `PATTERN.ANONYMISE_DATE`
- `PATTERN.MAPPING_TABLE`
- `PATTERN.MULTIPLY_BY_RANDOM_NUMBER`

Note: Use `PATTERN.` as a prefix to define a pattern.

- **Define Policy:** The system dynamically evaluates these policies based on the available **Data Attributes** during runtime.

- **Define Filter Criteria:** This step involves setting up rules based on one or more conditions that utilize Data Attributes within the system. The system dynamically evaluates the filter criteria at runtime.

- **Exposed Attributes:** This step allows linking additional attributes to derive the actual Data Attribute used in filter criteria through the Data Attribute Badi# (/APPSDM/DATA_ATTRIBUTES).

For example, when scrambling the Material Description based on Material Type in MAKT table since 'Material Type' is not available in MAKT table, you can use the additional attribute 'Material Number' (which is available in the table) to derive 'Material Type'. This can be achieved by implementing the Data Attribute Badi#(/APPSDM/DATA_ATTRIBUTES).

- **Scrambling Rule:** This step assigns a Policy and Pattern to the Scramble Attribute to define the execution of scrambling actions.

2.2 Technical Configuration

Technical users perform the technical configuration through the following steps:

- **Scramble Attribute:** This step maintains SAP tables for each Scramble Attribute.

- **Maintain SAP Tables:** This step maintains the reference table for the Scramble Attribute, which the system uses to prepare Staging Data. You can also maintain additional tables if required.

- **Maintain Relationships:** After setting up the reference table, link the reference table fields to the Scramble Attribute and the Key Attributes.

For example, Material Number is linked to the Key Attribute, and Gross Weight is linked to the Scramble Attribute.

Pathlock Data Scrambling - Relationships

Table Name: MARA
Table Type: Reference Table
Key Attributes: KEY.MATERIAL

Field Name	Is Primary Key	Data Element	Description	Key/Scramble Attribute
BSTME		BSTME	Purchase Order Unit of ...	
ZEINR		DZEINR	Document number (wit...	
ZEIAR		DZEIAR	Document type (withou...	
ZEIVR		DZEIVR	Document version (with...	
ZEIFO		DZEIFO	Page format of docume...	
AESZN		AESZN	Document change num...	
BLATT		BLATT	Page number of docum...	
BLANZ		BLANZ	Number of sheets (with...	
FERTH		FERTH	Production/inspection m...	
FORMT		FORMT	Page Format of Producti...	
GROES		GROES	Size/dimensions	
WRKST		WRKST	Basic Material	
NORMT		NORMT	Industry Standard Descri...	
LABOR		LABOR	Laboratory/design office	
EKWSL		EKWSL	Purchasing Value Key	
BRGEW		BRGEW	Gross Weight	SCRAMBLE.GROSS_WEIGHT
NTGEW		NTGEW	Net Weight	
GEWEI		GEWEI	Weight Unit	
VOLUM		VOLUM	Volume	
VOLEH		VOLEH	Volume unit	

- **Table Discovery:** After linking the Scramble Attribute and Key Attribute, perform Table Discovery to generate related tables where fields assigned to the Key Attribute and Scramble Attribute coexist. If the system does not discover any tables, you can add them manually as additional tables. The system will consider the reference table, discovered tables, and additional tables during the scrambling process.

Home Prepare Scrambling Process Scrambling Monitoring

Functional Config Technical Config

Technical Config

- Scramble Attribute
- PIP Technical Mapping
- Look Up
- Custom Code Implementation

Maintain SAP Tables -

Scramble Attribute: SCRAMBLE.GROSS_WEIGHT

Relationships Table Discovery

Table Type	Table Name
Reference Table	MARA
Discovered Table	VBAP
Discovered Table	VBFA
Discovered Table	MARM

- **PIP Technical Mapping:** This step assigns Data Elements to the Data Attributes using this configuration node.

- **Look Up:** This functionality enables the configuration of SELECT queries directly within the Look Up configuration, eliminating the need for a BADI.

- **Custom Code Implementation:** This step displays Data Attribute BADI implementations that are applied through custom code. Implement Data Attribute BADI# /APPSDM/DATA_ATTRIBUTES to derive Data Attribute values.

2.3 Process Data Scrambling

To proceed with Staging Mapping and Scrambling the attributes, navigate to the Process Data Scrambling tab.

- **Run Table Discovery:** Generates related tables where the Key Attribute and Scramble Attribute coexist.

- **View Discovery Results:** Displays the reference, discovered, and additional tables associated with the specified Scramble Attribute, if maintained.

- **Prepare Staging Data:** Select the Scramble Attribute to stage the data. The job will be scheduled, and data will be sent to Staging area.

- **View Staging Data:** Select the Scramble Attribute to review the staged data before scrambling each Key Attribute.

- **Scramble Data:** Select the Scramble Attribute to perform Data Scrambling.

- **View Status:** To view Staging, Scrambling and Table Discovery job status, select the Scramble Attribute and select one of the available options.

2.4 Monitoring

To export the Data Scrambling configuration via a Transport Request, navigate to the Monitoring tab and click the **Export configuration** button.

2.5 Maintain PFCG role for Scrambling

To maintain PFCG role for Scrambling, go to T-Code - /APPSDM/DS_AUTHSETUP and maintain the existing or new PFCG role, and the same role must be assigned to user to authorize for “Scramble Data”.

Note: This is a one-time setting. Users require this role to execute Data scrambling. PL_ROLE is used as an example; separate role must be maintained.

3 Sample Implementation

This section describes the use cases of the implementation.

3.1 Use Case 1: Scrambling Material Description Based on Material Group and Mapping Table Pattern

To scramble 'Material Description', the following configuration is required:

1. Define a Scramble Attribute **SCRAMBLE.MATERIAL_DESCRIPTION** and specify its description as **Material Description**.

2. Define a Key Attribute **KEY.MATERIAL** and specify its description as **Material ID** for Scramble Attribute **SCRAMBLE.MATERIAL_DESCRIPTION**.

- Define a **Data Attribute** with the Attribute ID **DATA.MATERIAL_GROUP** and specify its description as **Material Group**.

4. Create a **Policy** named **COND_SCRAMBLE_ITAR_DATA** and specify its description.

5. Define the Filter Criteria using the Data Attribute **DATA.MATERIAL_GROUP** within the Policy **COND_SCRAMBLE_ITAR_DATA**.

6. Configure the Scrambling Rule for the Scramble Attribute **SCRAMBLE.MATERIAL_DESCRIPTION**, linking it to Policy **COND_SCRAMBLE_ITAR_DATA** and the pattern **PATTERN_MAPPING_TABLE**.

The screenshot shows the Pathlock DAC: Prepare Data Scrambling interface. The 'Functional Config' tab is active, and the 'Scrambling Rule' is selected. A 'Policy Details' window is open, showing the configuration for the policy **COND_SCRAMBLE_ITAR_DATA**. The policy description is 'Condition to filter out material by material description' and its status is 'Active'. The filter criteria are defined as follows:

```
Filter Criteria:
IF DATA.MATERIAL_GROUP EQ WARHEAD
THEN
SCRAMBLE ATTRIBUTE: SCRAMBLE.MATERIAL_DESCRIPTION
USING PATTERN: PATTERN.MAPPING_TABLE
```

The 'What to Scramble?' section shows a list of attributes with checkboxes. The attribute **SCRAMBLE.MATERIAL_DESCRIPTION** is selected, and its corresponding filter and pattern are listed in the table below:

Attribute	Filter	Pattern
SCRAMBLE.BANK_ACCOUNT	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE
SCRAMBLE.BIRTH_DATE	FILTER_BY_MATERIAL_GROUP	PATTERN.MULTIPLY_BY_RAN...
SCRAMBLE.CENTRALIZATION	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE
SCRAMBLE.CHANGED_ON	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE
SCRAMBLE.COMPANY_NAME	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE
SCRAMBLE.DIVISION	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE
SCRAMBLE.DOC_DATE	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE
SCRAMBLE.EMAIL_ADDRESS	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE
SCRAMBLE.FIRST_NAME	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE
SCRAMBLE.GROSS_WEIGHT	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE
SCRAMBLE.MATERIAL_DESCRIPTION	COND_SCRAMBLE_ITAR_DATA	PATTERN.MAPPING_TABLE
SCRAMBLE.MONTH_OF_BIRTH	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE
SCRAMBLE.QUANTITY	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE
SCRAMBLE.SSN	FILTER_BY_START_DATE	PATTERN.CLEAR_VALUE

7. Under the **Technical Configuration** tab, maintain SAP tables for the Scramble Attribute **SCRAMBLE.MATERIAL_DESCRIPTION**.

The screenshot shows the Pathlock DAC: Prepare Data Scrambling interface with the 'Technical Config' tab active. The 'Scramble Attribute' is selected, and the 'Maintain SAP Tables' section is visible. The table below lists the attributes and their corresponding SAP tables:

Scramble Attribute	Description	Maintain SAP Tables
SCRAMBLE.ADDRESS	Address	Maintain SAP Tables
SCRAMBLE.BANK_ACCOUNT	Bank Account Number	Maintain SAP Tables
SCRAMBLE.BIRTH_DATE	BIRTH Date	Maintain SAP Tables
SCRAMBLE.CENTRALIZATION	Centralized Attribute	Maintain SAP Tables
SCRAMBLE.CHANGED_ON	Changed On	Maintain SAP Tables
SCRAMBLE.COMPANY_NAME	COMPANY Name	Maintain SAP Tables
SCRAMBLE.DIVISION	Division	Maintain SAP Tables
SCRAMBLE.DOC_DATE	Document Date	Maintain SAP Tables
SCRAMBLE.EMAIL_ADDRESS	Email Address	Maintain SAP Tables
SCRAMBLE.EMAIL_ADDRESS_CAPS	Email Address Caps	Maintain SAP Tables
SCRAMBLE.FIRST_NAME	First Name of Perner NO	Maintain SAP Tables
SCRAMBLE.GROSS_WEIGHT	Gross Weight	Maintain SAP Tables
SCRAMBLE.MATERIAL_DESCRIPTION	Material Description	Maintain SAP Tables
SCRAMBLE.MONTH_OF_BIRTH	Month of Birth	Maintain SAP Tables
SCRAMBLE.PERSON	Person	Maintain SAP Tables
SCRAMBLE.QUANTITY	Quantity	Maintain SAP Tables

8. Select the reference table and establish relationships for the Scramble Attribute **SCRAMBLE.MATERIAL_DESCRIPTION** for field **MAKTX** and Key Attribute **KEY.MATERIAL** for field **MATNR**.

9. Click **Table Discovery** to get the discovered tables.

10. Under the **Technical Configuration** tab, define the Attribute **DATA.MATERIAL_GROUP** and map it to the Data Element **MAKTL**.

11. Navigate to the **Process Data Scrambling** tab to proceed with staging and scrambling the material attributes. Click **Prepare Staging Data** to stage the attributes,

(a) Select the Scramble Attribute **SCRAMBLE.MATERIAL_DESCRIPTION** and execute.

12. Click **View Staging Data** to review the staged data.

- (a) Enter the Scramble Attribute **SCRAMBLE.MATERIAL_DESCRIPTION** and click **Execute** button to display the staging for the material description.

- (b) The **Staging Area** allows reviewing the **Material Description** (Scramble Attribute) before scrambling it for each **Material Number** (Key Attribute).

13. Click **Scramble Data** to scramble the material attributes.

- (a) Select the Scramble Attribute **SCRAMBLE.MATERIAL_DESCRIPTION** and click **Execute** button to apply scrambling to the material description.

14. To view the status of Table Discovery, Staging, or Scrambling Data, click **View Status**.

Pathlock DAC: View Status

Selection Criteria

Scramble Attribute	SCRAMBLE_MATERIAL
Process Type	
Status	
Start Date/Time	20.250.211.000.000 to 20.250.311.235.959
End Date/Time	20.250.211.000.000 to 20.250.311.235.959

Scramble Attribute	Process Type	Status	User	Start Date (DD-MM-YYYY)	Start Time (HH:MM:SS)	End Date (DD-MM-YYYY)	End Time (HH:MM:SS)
SCRAMBLE_MATERIAL_DESCRIPTION	Staging	Finished	NHATRI	11-03-2025	17:00:49	11-03-2025	17:32:35
SCRAMBLE_MATERIAL_DESCRIPTION	Scrambling	Finished	NHATRI	11-03-2025	17:35:16	11-03-2025	17:35:17
SCRAMBLE_MATERIAL_DESCRIPTION	Table Discovery	Finished	NHATRI	11-03-2025	16:11:14	11-03-2025	16:11:15

Expected Results:

After implementation, the following outcomes demonstrate the expected results of Data Scrambling. The scrambling will apply across all output formats, including GUI Transactions (MM03), SE16 table outputs, downloaded data in ALVs, search help, and any instance where the Data Element **MAKTL** is used:

- **Scrambling in Transaction 'MM03':** The **Material Description** field will appear scrambled in the MM03 transaction.
