Introduction

Pathlock's 2026 Q1 release of Dynamic Access Controls (DAC) introduces enhanced capabilities in cybersecurity and Governance, Risk, and Compliance (GRC). This product overview highlights the architecture, features, requirements, and coverage of Pathlock DAC, focusing on its ability to dynamically control access, enforce policies, and protect data across various scenarios.

Architecture

The following diagram illustrates the architecture of DAC:

- **ABAC Controls:** Applied at a single point of interception at the Data Element.
- **Centralized Policy Management:** Enables efficient management of policies.
- **Low Total Cost of Ownership (TCO):** Requires no additional hardware, ensuring quick implementation.
- **Flexible Access Controls:** Grants access based on data, environment, or subject attributes.
- **Comprehensive Features:** Includes Data Classification, User Master, Data Access Logs, and Alerts.

Examples

Masking PII Data

Users can view SSNs in T-code BP only if specific criteria are met, such as:

- Country
- Required Role

Restrict Access to Materials: Implementing Multiple DAC Policies

- **Data Restriction Policy:** Users are restricted from accessing Materials when the Material Group is classified as Chemical.

- **Data Masking Policy:** Users are unable to view Material Description and Quantity when the Material Group is identified as Sweetener.

Access to Plant (Removing Derived Roles)

Dynamic Access Controls (DAC) facilitate access management by dynamically granting access based on user attributes. This eliminates the need for manual role assignments and simplifies access management.

Plant access can be assigned or modified through User Master Maintenance, reducing maintenance efforts compared to managing multiple derived roles for different users and organizational elements.

Transitioning from derived roles to assigning user attribute values via Pathlock DAC – User Master Maintenance reduces complexity and maintenance efforts, especially as the number of users grows. This approach simplifies ongoing maintenance tasks, such as adding or removing user access, and results in greater efficiency and scalability.

Users can access Plants based on configurations maintained in Pathlock DAC – User Master Maintenance.

- **User Tesla** is authorized to access Plant 1710 but does not have access to Plant 1010.
- **User Einstein** is authorized to access Plant 1010 but does not have access to Plant 1710.

Transaction Codes: MB21, CS03, etc.

Requirements

The Pathlock DAC solution is compatible with SAP NetWeaver 700 / ECC 600 up to the latest SAP S/4HANA version.

Features

Pathlock DAC supports both **Data Masking** and **Data Restriction** functionalities, providing robust protection against unauthorized data access. These features are available across multiple output options, including:

- ALV Grid
- ALV List
- SE16 Standard List
- Classical reports (via WRITE statements)
- Search Helps
- Module Pool
- Web Dynpro Applications
- UI5/Fiori Applications
- BW Applications

Pathlock DAC includes the following features:

- Supports Data Masking and Data Restriction, functioning independently of the transaction or application, and based on the Data Element.
- Provides separate sections for business and technical configurations.
- Enables business users to write DAC policies in simple language.
- Allows technical users to map business objects to technical objects such as Data Elements and write ABAP code.
- Offers reusable and modular DAC policies, allowing multiple policies to be linked to a single field.
- Supports integration of custom attributes via custom code based on customer requirements.
- Provides a modular and reusable architecture, allowing custom attributes to be created once and reused across the system.
- Supports reading SAP and custom tables to extract attributes such as Citizenship, User Clearance Level, Material Classification, VIP Status, Material Sensitivity, and more.

Product Overview

Pathlock Dynamic Access Controls

- Includes a System Readiness Check Report to ensure all necessary parameters are installed and SPIs are implemented before product use.
- Offers a Data Classification feature that categorizes data based on a predefined set of rules using one or more conditions of Data Attributes.
- Includes a User Master Maintenance feature to maintain User Attribute values for given user IDs.
- Provides a Centralization feature to publish policy configuration data to the designated system.
- Offers a Field Finder Report to locate and maintain the technical address of fields when technical information is not readily available.
- Displays policy execution logs via the DAC execution logs feature.
- Provides the ABAC Feed feature to display the past 24 hours' execution logs, with real-time updates upon using the refresh button.
- Supports exporting DAC configuration via Transport Request or file, with import options for the target system or client.
- Introduces the Masking Pattern feature, enabling users to maintain different patterns for Data Masking scenarios.
- Provides a Masking Message feature to define custom messages for Data Masking scenarios on a per-policy basis.
- Enforces strict authorization checks for creating and editing policies based on specified fields.
- Includes Pre-conditions functionality to determine whether policy evaluation is required.
- Supports Data Masking and Data Restriction in Web Dynpro.
- Supports Data Masking in BW Analytical Applications
- Supports Masking in classical reports using WRITE statements
- Delivers Policy versioning capability to track/compare the changes between different versions
- It provides Policy and Data Classification simulation capabilities to test and validate the policy and data classification rules conditions

What's New

New Features in Pathlock DAC 2026 Q1 Release:

Pathlock DAC introduces the following UI enhancements:

- **Data Restrictions:** Extended support got Data Restriction in OData V2 services
- **Policy Alerts:** Introduced email alerts for DAC policy activity, giving administrators quick visibility into monitored policy evaluations without manual log checks.

Coverage

The Pathlock DAC 2026 Q1 release enhances Data Masking and Data Restriction across the following scenarios:

- ALV Grid Display
- ALV List
- SE16 Standard List
- Data Masking in classical reports (via WRITE statements)
- Search Helps
- Module Pool Transactions
- UI5/Fiori Applications
- Web Dynpro
- Data Masking in BW Applications
